

Shinde Procurement — V1 Test Cases

Purpose: Practical, user-focused test cases covering every major feature and realistic user mistakes. Use alongside the companion User Guide document.

ID	Feature / Flow	User Scenario	Steps	Expected Result
TC-01	Login	User logs in with correct details	Enter valid username/password → Login	User reaches Dashboard
TC-02	Login (mistake)	User forgets password	Enter valid username, wrong password → Login	Clear error shown; user stays on Login, can retry
TC-03	Login (mistake)	User leaves fields blank	Tap Login with empty fields	Error shown; login blocked until filled
TC-04	Dashboard	User reviews today's snapshot	Open Home tab	4 stat cards show current numbers; Recent Orders list appears
TC-05	Dashboard filter	User checks only delayed orders	Tap "Delayed" filter on Home	List narrows to delayed orders only
TC-06	Vendor search	User finds a vendor by name	Type partial vendor name in search	Matching vendor(s) appear as you type
TC-07	Vendor filter	User views only inactive vendors	Tap filter icon → Inactive	Only inactive vendors shown
TC-08	Vendor Workspace	User opens a vendor	Tap a vendor from the list	Workspace shows correct name, logo/initial, and 4 stats
TC-09	Vendor logo upload	User sets a vendor's logo	Tap vendor avatar → choose Camera or Gallery → pick photo	Logo uploads and displays immediately
TC-10	Vendor logo upload (mistake)	User cancels the picker	Tap avatar → open picker → back out without picking	No change; existing logo/initial stays as-is
TC-11	Add Product	User adds a new product with all details	Fill Vendor Product ID, Name, Price, add 1 photo → Save	Product created; user moves to Add Variant
TC-12	Add Product (mistake)	User forgets a photo	Fill all text fields but add 0 photos → Save	Clear error: at least 1 photo required; product

ID	Feature / Flow	User Scenario	Steps	Expected Result
				not saved
TC-13	Add Product (mistake)	User enters invalid price	Enter "abc" or a negative number in Price → Save	Clear error shown; product not saved
TC-14	Add Product (mistake)	Duplicate Vendor Product ID	Use a Vendor Product ID already used for this vendor → Save	Error shown; duplicate not created
TC-15	Add Product	User adds up to 4 photos	Add 4 photos one by one	All 4 show as thumbnails; first is marked "Cover"; Add button disappears after 4
TC-16	Add Product	User removes a photo before saving	Add 2 photos → tap × on one	Photo removed; remaining photo(s) still shown correctly
TC-17	Add Variant	User adds a variant with suggestions	Type category, pick a suggestion; repeat for Color → Save	Variant created with selected values
TC-18	Add Variant	User types a brand-new category	Type a category name not in the list → Save	New value is accepted and saved (not blocked)
TC-19	Add Variant (mistake)	User leaves Category blank	Leave Category empty, fill Color → Save	Error shown; variant not saved
TC-20	Assign Sizes	User assigns several sizes	Tick 3 sizes → Continue	Exactly those 3 sizes saved for the variant
TC-21	Assign Sizes (mistake)	User unassigns a size later	Reopen sizes, untick one previously assigned size → Continue	That size is removed, not just left alongside the rest
TC-22	Cart	User adds a size to cart	From catalogue, select a variant/size → Add to Cart	Item appears in vendor's Cart

ID	Feature / Flow	User Scenario	Steps	Expected Result
TC-23	Cart (repeat action)	User adds the same size twice	Add the same product/variant/size to cart twice	No duplicate row; existing entry is reused, not doubled
TC-24	Create Order	User sets valid order dates	Set PO Date today, Delivery Date a week later → Continue	Proceeds to Product Details
TC-25	Create Order (mistake)	Delivery date before PO date	Set Expected Delivery Date earlier than PO Date → Continue	Clear error; cannot proceed until corrected
TC-26	Order Remarks suggestion	User reuses a past remark	Start typing in Remarks	Matching previous remarks appear; tapping one fills the field
TC-27	Product Details	User edits pricing before confirming	Change Cost/MRP/GST% for a size → observe Amount	Amount recalculates correctly (Cost × Qty)
TC-28	Product Details	User adjusts quantity	Tap + / – on a size's Qty	Qty updates; Amount and Order Summary totals update to match
TC-29	Product Details	Multiple variants toggle	With 2+ variants in the order, switch one toggle off	That variant's rows hide from the table; totals stay unchanged (still includes it)
TC-30	Product Details (mistake)	User cancels instead of confirming	Tap Cancel	Returns without creating the order; cart is not cleared
TC-31	Place Order	User confirms a valid order	Complete all fields correctly → Order Product	Order created; cart for that vendor is cleared; order appears in Orders as Pending
TC-32	Orders filter	User checks pending orders	Open Orders tab → tap "Pending"	Only pending (not delayed, not delivered) orders shown

ID	Feature / Flow	User Scenario	Steps	Expected Result
TC-33	Orders date filter	User checks a specific delivery window	Set From/To dates covering a known order's delivery date	That order appears; others outside the range don't
TC-34	Orders combined filter	User combines status + date filter	Set a date range AND tap "Delayed"	Only delayed orders within that date range shown
TC-35	Orders filter (mistake)	User sets To date before From date	Set From to a later date than To	List shows no results or a clear empty state — not an error/crash
TC-36	Autocomplete	User picks a suggestion	Start typing in a suggestion-enabled field, tap a suggestion	Field fills with the exact tapped value; suggestion list closes
TC-37	Autocomplete (mistake)	User types something with no match	Type a value that matches nothing existing	No suggestions shown; user can still save the new value as free text
TC-38	Refresh	User pulls updated data	Tap the refresh icon on Home / Vendor list / Vendor Workspace / Orders	Latest data loads; spinner shows briefly during refresh
TC-39	Permissions (Assumption)	User without required access attempts a restricted action	Attempt an action tied to a permission the logged-in role shouldn't have	Action is blocked or hidden — needs confirmation, not fully verified in current build

Notes for the Testing Team

- Test on a device with a real network connection — several screens depend on live data (Dashboard KPIs, autocomplete suggestions, pricing prefill).
- For delivery/payment status changes, coordinate with whoever has admin access, since these aren't available from the app itself in V1.
- If any test case's actual result differs from Expected Result, log it with a screenshot and the exact steps used — several behaviors above (especially TC-39) depend on backend logic that should be double-checked against the current build before treating a mismatch as a bug.
