

Shinde Procurement — V1 User Guide

Purpose: Help any team member understand how the app is meant to be used — what each feature does, when to use it, and how.

1. Login

What it does: Signs the user into the app with a username and password. **When to use it:** Every time the app is opened. **How:**

1. Enter Username
 2. Enter Password
 3. Tap Login **Example:** A buyer opens the app each morning and logs in before checking today's orders.
-

2. Dashboard (Home)

What it does: Shows a quick snapshot of the business right now — active vendors, products currently on order, pending orders, and money still owed to vendors — plus a list of recent orders still awaiting delivery. **When to use it:** First screen after login; the "what needs my attention today" view. **How:**

1. Open the Home tab
 2. Review the 4 stat cards: **Vendors, Products, Orders, Due Payment**
 3. Scroll the Recent Purchase Orders list; use **All / On Time / Delayed** to narrow it **Example:** A manager checks Home each morning to see how many orders are currently delayed. **Note:** These numbers update live — they are not fixed counts. Once an order is delivered, it disappears from these totals automatically. Once an order is marked paid, it drops out of Due Payment.
-

3. Vendors

What it does: Lists every vendor and lets you open one to work with their products and orders. **When to use it:** Whenever starting work with a specific supplier. **How:**

1. Open the Vendor tab
 2. Use the search bar to find a vendor by name
 3. Tap the filter icon to show only **Active** or **Inactive** vendors
 4. Tap a vendor to open their Workspace
-

4. Vendor Workspace

What it does: A vendor's home base — shows their logo, Total Products, Total Variants, Current (pending) Orders, and how many items are In Cart for them right now, plus quick actions to browse the catalogue, add a product, or view their cart/orders. **When to use it:** After picking a vendor, before adding products or placing an order. **How:**

1. Tap the vendor's circular logo to upload/change their photo (camera or gallery)
 2. Use the action buttons to go to Catalogue, Add Product, Cart, or Orders
 3. Tap the refresh icon if the counts look out of date **Example:** Before visiting a supplier, a buyer opens that vendor's Workspace to check how many orders are already pending with them.
-

5. Product Catalogue

What it does: Shows every product already added for the selected vendor. **When to use it:** To browse or re-order an existing product. **How:** Open a vendor → Catalogue → tap a product to see its variants.

6. Add Product

What it does: Creates a new product under a vendor. **When to use it:** When a vendor offers something not yet in the catalogue. **How:**

1. Enter **Vendor Product ID** (required, must be unique for this vendor) and **Product Name** (required)
 2. Optionally enter Customer Product ID and Remark (both suggest previously used values as you type)
 3. Enter Price (required, must be a valid number)
 4. Add 1 to 4 photos (at least one is required) via camera or gallery — the first photo becomes the "Cover" photo shown everywhere else
 5. Tap Save & Add Variant **Example:** A new pair of shoes arrives from Nike; the buyer photographs it and adds it as a new product before building its variants.
-

7. Add Variant

What it does: Defines a specific version of a product — its category and color. **When to use it:** Right after adding a product, or to add another color/category option to an existing product. **How:**

1. Enter or pick a suggested **Category**
2. Enter or pick a suggested **Color**

3. Optionally add Remarks
 4. Tap Save Variant **Example:** The same shoe model comes in "Black" and "Red" — each color is added as its own variant.
-

8. Assign Sizes

What it does: Selects which sizes are available for a variant. **When to use it:** Right after creating a variant. **How:** Tick every size this variant is available in, then Continue. Unticking a size later removes it — it does not stay assigned.

9. Cart

What it does: Holds products/variants/sizes for a vendor before they're turned into an order. **When to use it:** While deciding what to order from a vendor, before finalizing quantities and pricing. **How:** Add sizes from the catalogue → open Cart to review → proceed to create the order.

10. Create Order

What it does: Starts a new purchase order for everything currently in a vendor's cart. **When to use it:** Once the cart has everything needed for this order. **How:**

1. Confirm/adjust the **PO Date**
 2. Set the **Expected Delivery Date** (cannot be before the PO Date)
 3. Optionally add Remarks (suggests previously used order remarks)
 4. Continue to Product Details
-

11. Product Details (Order Review & Pricing)

What it does: Final review before placing the order — set quantity, GST%, Cost, and MRP for each size. **When to use it:** Last step before confirming a purchase order. **How:**

1. If multiple variants are in this order, use the toggle switches to show/hide each one in the table (view only — doesn't remove it from the order)
 2. Adjust Qty with the +/- buttons
 3. Edit GST%, Cost, and MRP directly in the table (these prefill from the last time that exact size was ordered, if available)
 4. Review Total Items, Total Qty, and Total Amount
 5. Tap Order Product to confirm, or Cancel to discard **Example:** A buyer notices the supplier's cost went up this month and updates the Cost field before confirming.
-

12. Orders

What it does: Shows every purchase order, with filters to find exactly what you need. **When to use it:** To check order status, or see what's due on a specific date. **How:**

1. Use **All** / **Pending** / **Delayed** / **Delivered** to filter by status
 2. Use **From** / **To** to filter by expected delivery date range
 3. Filters can be combined (e.g. Delayed orders due next week) **Example:** A manager checks "Delayed" every Monday to see what needs following up with suppliers. **Note (Assumption):** Marking an order as delivered or paid is not currently available from within the app — this is done separately by an administrator.
-
